VARNING: VACCINE-INDUCED DISEASE AND NADEQUATE IMMUNE RESPONSE TO VACCINES. Based on results of the vaccine response study. logs receiving Zenrelia are at risk of fatal accine-induced disease and inadequate immune esponse to vaccines. Dogs should not take enrelia for a time period before and after raccination. Discuss your dog's vaccine schedule vith your veterinarian. Dogs should be up to date on raccinations prior to starting Zenrelia. Do not use in logs less than 12 months old or dogs with a serious nfection. Dogs should be monitored for the levelopment of infections because Zenrelia may ncrease the chances of developing an infection. Veoplastic conditions (benign and malignant) were observed during clinical studies. The most common side effects were vomiting, diarrhea and tiredness. Zenrelia has not been tested in dogs used for preeding, pregnant, or lactating dogs and has not been evaluated in combination with glucocorticoids, cyclosporine, or other immune suppressive drugs.
